

Business Process Manager

Sample Features

- Modifiable BI dashboards & management reports
- Applies system based controls on operations
- Sends status based alerts
- Map workflow and use alerts as reminders or to send additional instructions
- Assign automated process controls as tasks
- Dynamic alerts based on performance indicators, I.e.: Over-due, late, low stock etc...
- Deny transactions based on pre-defined parameters; I.e: PO above threshold, sales discount to high etc...
- Push responsibility to employees and free managers time
- Use process management tasks as part of training component for new employees
- Each employee using the system has a personal "Task" screen where all current and new tasks are posted
- Use "Priority" flags and "Color" coding to prioritize Tasks on the employee Task screen
- Track pre-defined "Compliance" and auto generate required screens, documentation, tasks or audit reports
- Analyze and report on full activity audit logs by event, order, user or date
- Use triggers and alerts on any measurable data or transaction in the system
- Drill down from tasks to their parent records
- Assign individual users or user groups to tasks

The Challenge:

Controlling your operational processes and ensuring schedules, tasks and any required compliance issues are performed and executed in a timely manner...

The Solution

FBS Business Process Manager.

- Apply system controlled workflow
- Control events by applying parameters
- Build task schedules, with alerts, per operation
- Ensure all compliance requirements are met
- Analyze employee performance
- Apply metrics and alerts to key performance indicators
- Apply alert & messaging triggers on any operation in the system

Server Hardware: Minimum Specs

Computer/processor:	Intel Dual 3 GHz CPU
Memory (RAM):	2 GB
Hard disk size/SCSI/RAID:	100 GB of RAID 5 storage. (Additional storage may be required if documents are to be stored in the database.)
Network card:	1 GB
Display requirements:	1024 x 768
Peripherals:	CD/DVD ROM

Server Software:

OS:	Windows XP, Windows 2003 Server, Mac OS 10, Linux
Browser requirements:	IE 6.0 or 7.0
Additional software requirements for server and/or client components (MS Office, .NET, etc.)	Java JDK 1.6

Desktop Software:

OS:	Windows XP Home, Pro, Vista, Mac OS10, Linux
Productivity software:	Excel, WordPad or MS Word
Application specific:	Java Runtime Engine V.1.6.0
