

Document Builder

Sample Features

- Create templates within Microsoft Word or Excel
- Build documents based on a template
- Use the data from inside FBS
- Create customized documents such as
Contracts, Quotes, RFP's,
- Save documents to FBS's document repository
- Managed by users with no IT support required
- Build standard sections for reuse
- Produce templates based on standard sections
- Place system data anywhere in the document
- Add any type of document formatting supported
by Microsoft Word or Excel
- Manage all document revision/versions
- Granular security by template; Add/Edit/Delete
based on user privileges
- Embed any type of data or graphics
- Document access audit trail
- Print documents as Microsoft Word, WordPad or
Adobe PDF
- Supports Microsoft Word 2003 and 2007

The Challenge:

Create standardized documents and reports based upon data in the system. Allow users to create and manage their own documents based on standard corporate terms and language. Provide an easy to use tool to create and edit the documents.

FBS Document Builder

- Integrated with Microsoft Office (Word and Excel)
- Pull data directly from FBS into a new Document
- Managed completely by end users
- Standard document templates corporate terms and conditions
- Easily produce simple or detailed reports
