

Web Services

Sample Features

- Supports open standards for Web Services
- Build customer self-service websites
- Provide ways for suppliers to interact directly with your data
- Uses the same business logic as the system screens
- Easily adapted to meet the needs of other applications
- Supply Chain ready on install with addition of FBS Data Import / Export Manager
- Use for secure Intranet or Extranet
- Embedded content management component allows automated data capture from multiple external web / data sources
- Unlimited online Customer and Supplier accounts with no increase in user costs
- Depending on user privileges, online user may export data to Excel spreadsheets
- Highly secure with multiple levels of security available
- Full user audit trails for online users

The Challenge:

Need to be able to integrate with other corporate applications. Provide a secure way for customers and suppliers to directly access your data.

FBS Web Services Manager

- Provides access to external applications
- Share data with other corporate applications
- Build customer and supplier websites to share data
